Professional Summary

Solutions Engineer and BYU MISM candidate with proven success driving enterprise deals and navigating complex technical evaluations. At Lucid Software, influenced over \$488K in pipeline across enterprise, healthcare, and public sector accounts by leading technical discovery, AI integrations, and demos for up to 50+ attendees. Backed by hands-on depth in cloud architecture (AWS, GCP), familiarity with enterprise standards (SOC 2, FedRAMP, ISO 27001), and a track record of translating intricate systems into clear business value.

Education

Master of Information Systems Management (MISM)

Dec 2026

Solutions Engineering Emphasis, STEM-Certified Technical Program

Brigham Young University – Marriott School of Business, Provo, UT

- Relevant Coursework: **Technical Sales**, Technical Business Strategy, AI Projects, Cloud Engineering
 - GPA **3.94/4.00**
 - Full-Tuition Academic Scholarship, Marriott School **Dean's List** Academic Award Recipient
 - Association of Information Systems (**AIS**), Mentorship Program (Mentoring 8 Junior IS students)
-

Customer-Facing & Technical Experience

Sales Engineer

May 2026 - Present

Lucid Software, South Jordan, UT

- Influenced \$488,727 in sales pipeline across 38+ opportunities
- Contributed directly to 4 closed-won deals worth \$79,633, including a five-figure deal generating \$23,528 in incremental ARR
- Supported and led 49+ customer calls (including sessions with 50+ participants), partnering with enterprise, government, and healthcare accounts
- Deepened technical product expertise by researching and resolving cross-functional questions on AI/MCP integrations, Terraform, and licensing for the broader SE team, strengthening customer-facing demo readiness

Platform Engineer Intern

June 2025 - Aug 2025

SonicWall, Remote

- Partnered with internal security and platform teams (primary stakeholders) to gather requirements and design a cross-cloud AWS → GCP log pipeline, enabling faster CSIRT investigation workflows
- Translated security team needs into a scalable technical solution using CloudWatch, Kinesis Firehose, IAM, and GCP storage, improving log accessibility across platforms
- Iterated on multiple solution designs based on stakeholder feedback, balancing security, scalability, and usability concerns
- Authored clear Confluence documentation to support onboarding and knowledge transfer, improving adoption and long-term maintainability

Lab & Instructional Assistant: Cloud Engineer, DevOps, & Cybersecurity

Jan 2025 - April 2026

Brigham Young University, Provo, UT

- Explained complex cloud, DevOps, and cybersecurity concepts to 250+ non-technical and early-technical students, adapting explanations to varying levels of technical understanding

- Diagnosed student issues in AWS, Docker, and Terraform environments by asking clarifying questions and identifying root causes before proposing solutions
 - Balanced competing priorities across multiple stakeholders (students, faculty, course timelines) while delivering timely technical support
 - Improved student comprehension and confidence by translating abstract system behavior into practical, real-world examples
-

Technical Skills

- **Cloud Platforms & Architecture:** AWS (EC2, S3, IAM, Lambda), GCP; experience designing, evaluating, and explaining cloud architectures and technical trade-offs to diverse stakeholders.
 - **DevOps, Automation & APIs:** Terraform, Docker, Kubernetes; CI/CD pipelines (AWS CodePipeline, CodeDeploy), API integrations, and scripting to support scalable, repeatable workflows.
 - **Security & Risk Concepts:** Cloud security fundamentals, system hardening, authentication, and risk assessment
 - **Software & Scripting:** Python, JavaScript, C#, HTML/CSS; familiarity with full-stack development concepts using ASP.NET Core MVC.
 - **Collaboration, Delivery & Enablement:** Agile/Scrum methodologies, Git-based workflows, and clear technical documentation to support knowledge transfer for technical and non-technical audiences.
-

Accomplishments, Projects, & Certifications

- **MISM Capstone Project: Hill Air Force Base Cybersecurity Training**

Technologies: Virtualization (VMs), Cybersecurity

- Designed and delivered a virtualized cybersecurity training environment tailored to Air Force technical professionals
- Collaborated directly with stakeholders to gather requirements and ensure deployment within a secure, air-gapped network
- Balanced usability, security constraints, and instructional clarity to support effective hands-on learning

- **AWS Certified Cloud Practitioner | Amazon Web Services**

Earned April 2025

- Validated foundational cloud concepts across compute, storage, security, and pricing models
- Strengthened ability to explain cloud trade-offs and architecture decisions to non-technical audiences

- **FinOps Certified Practitioner | FinOps Foundation**

Technologies: AWS, Azure, GCP

- Demonstrated expertise in cloud financial management and cost optimization
- Applied cost-aware decision-making principles when evaluating and recommending cloud solutions

- **AIS Data Analytics Competition – National Finalist (3rd Place, 2024)**

Technologies & Skills: Python Pandas, Machine Learning, Professional Presentation

- Collaborated with a cross-functional team to analyze data and generate strategic insights under tight deadlines
- Presented findings to judges in a professional setting, translating technical analysis into clear business recommendations

- **BYU Information Systems - Program-Wide Tech Competition – 2nd Place (Fall 2023)**

Technologies & Skills: Elastic Beanstalk, RDS, EC2, JavaScript, Node.js, Python Pandas, Presentation

- Built and presented a cloud-based web solution to faculty and industry judges
- Recognized for combining strong technical execution with clear, persuasive communication
